

Project Management / Application Architects

Not all projects are the same. Different approaches may be required based on the specific solution and client objectives. Genesis offers the flexibility to provide various delivery approaches. Many approaches share some common components but use distinctive paths to project success.

Genesis project managers and technical resources follow

a methodology defined by Initiating, Planning and Design, Executing, Monitoring, Controlling, and Closing. It is with this methodology that Genesis delivers the highest quality teams with PMI Certifications, all working to deliver on-time, on-budget solutions that meet or exceed customer expectations.

We get the project started and on-track using standard templates and deliverables for each phase using the following:

- ◆ Resource Estimation
- ◆ Project Scheduling
- ◆ Status Reporting
- ◆ Risk Management
- ◆ Issue Tracking
- ◆ Budget Management
- ◆ Scope Control
- ◆ Change Management
